Hi Dr. Ayata and Ryan,

Basav (Yale) sent me these files, I thought I would pass it along to you for your review.

"The data uploaded on 4/23/21 belongs to Day0

Today I will upload (4/28/21) for day2 Scans

I was worried about anesthesia in aged mice but all scans went well on Day0. We find no issues with anesthesia in aged mouse so far. We only lost one animal on day2 scan that it died while scanning.

I will also write a description in a word file and send it to you and Ryan later today or early tomorrow

Thanks and Regards

Basav"

Thanks,

Karisma

Sure. Here are the animal IDs for BL and day2 scans . These are aged mice 18- 19 month old

Thanks

Basav
