Hi Karen and Ryan,

The MRI group is asking us to collect TTC and histology images to compare against the MRI scans which will be uploaded into the 'MRI Validation D2' Visit Code. This is to validate Ryan's MRI pipeline. What file types does IDA accept if sites were to upload images (not MRI scans)? We may need to create an 'MRI Validation D30' as well. This is something we can discuss at the 5/17 LONI Meeting. For reference see Dr. Lyden's note below:

"The sites should take a picture or scan of their histology images and upload them to IDA using the same visit code. The cresyl violet stained sections will go with the Day 30 visit, and the TTC stained sections will go with the Day 2 visit code. Then we have to let Ryan know the images are in IDA. We can discuss at our next LONI call with Karen."

Thanks for your guidance,
Karisma
