Ryan

This animal has a definite and obvious hemorrhagic transformation. Do you have an MRI to look at?

Dear CC team members,

Yesterday afternoon, our animal house staff found the mouse (id # AM5396) dead. We were notified today morning.

We were able to get brain sections and TTC staining. I suspect there is a possible mild hemorrhage. Attached please find the images (the mouse was not perfused).

This mouse had MCAO surgery on 10/6/2020 and it received all the intended treatments, had 48 hour MRI and day 7 behavioral analysis as well.

Thanks  
Nirav
