There are two TINY hemorrhages here, likely way too small for you to detect. We will keep looking for some good hemorrhages, but for now, do not do any further work on this.

Hi Karisma and Jessica,

Attached are the TTC images for the 5 animals we did for the 48h endpoint. Hemorrhage is present in animals QC3021, slices #3-5, and QC3025, slice #5.

Best,
Tom Qin
