Dear Spanners,

Attached is the enrollment data as of Week 4. We are in good, not great, shape. We have discovered a built-in 2-week pause when the RIC machine moves from one site to the next. We at the CC will work on some ways to minimize that pause. Data quality has gotten better—thank you for prioritizing that. But it takes constant diligence to keep all the identifiers and dates straight and be super compulsive with data entry. PIs please help your teams remember that data quality must be built in – its not something we add in at the end of the trial. In your experiment planning and animal ordering, please be mindful of the holidays – the 30-day MRI and behavior scoring must be done within the allowable windows.

Have a good week everyone, we are humming now,

The CC
