Ryan,

From the attached, you can see how the MRI data is being used as a QC metric in the SPAN network. The chart is time-dependent, so its important that the data be sorted according do enrollment date. Is that what you did? If not, it does not matter, we are still very early on. But for the next data transfer, please keep this in mind.

Many thanks

PL

Hi all,

I updated the quality control chart. Please see attachment. We did have a treatment effect. Unfortunately, we do not have enough subjects to split the curves by sex yet.

There was no date of enrollment, therefore, I assumed that subjects are ordered in the spreadsheet by date of enrollment within site. Let me know if that is not the case.

Kind regards,

Marcio
